

graph\_theory::graph\_in

```
graph LR; A[graph_theory::graph_in] --> B[graph_theory::add_edge]
```

A diagram showing a call from `graph_in` to `add_edge`. The `graph_in` node is a gray rectangle on the left, and the `add_edge` node is a white rectangle on the right. A dark blue arrow points from the right side of the `graph_in` node to the left side of the `add_edge` node.

graph\_theory::add\_edge
